

MES 6.3 release notes

User experience

- Highlighting Virtual coordinates (on setups with tilting objective unit)
- User friendly DoCallback module settings
- Emergency function stops all configured handwheel axes
- Minimum LUT range to prevent amplifying the noise

Stability

- Improved stability for objective arm control
- Fixed freezes and errors during Curve analysis export function
- Shutter handling fix on SMART systems (shutter checkbox appeared with no shutter configured)
- Femtonics Log Collection System to prevent and diagnose issues
